Help students learn about the water crisis in Central Africa using a trivia quiz. This curriculum gives them a chance to help end the water crisis in Central Africa.

SUPPLIES:
- Projector and PowerPoint for trivia game
- Trivia questions (if not using PowerPoint)

WARM-UP ACTIVITY

Share the following with the participants: This activity is designed to get you thinking about how not having access to clean water would affect your life.

Next, state the following: Most people can only survive three days without water. Imagine this. You wake up tomorrow morning and you don’t have running water at your house. What would you do?

Facilitator Notes: After asking the initial question below, participants will say things like “I’ll just go next door” or “I’ll go to the store and buy water.” Respond by saying, “Your neighbors don’t have any water either” and “stores in your community don’t sell water” or “you don’t have enough money to buy water at the store.” Keep responding to their comments until you get them to the point where they realize they will have to go to a lake, river, pond, or another natural body of water to fetch water.

Ask the students: How far would you have to walk to get to the body of water? Would you drink the water you collected? Do you think the water would make you sick? Many people in the world, and most people in the Central African Republic live their entire lives under such circumstances—on average walking over a mile to fetch their water.

Facilitator Notes: Once the participants realize it is going to be rough having to fetch water that isn’t safe to drink in order to survive, they are ready for the water trivia game.

Questions? info@waterforgood.com
1. In order for everyone in the world to achieve the current lifestyle of the average European or North American, it would require 3.5 times as much water as the entire supply available on Earth.
   a. True
   b. False
   Answer: True

2. The average American uses 80 times as many gallons of water per day than the average person from the Central African Republic.
   a. True
   b. False
   Answer: True (400 gallons vs 5 gallons)
